Sustainability through **Automation**

George Dorsey

Sustainability and IT

three primary drivers behind sustainability initiatives

cost
savings

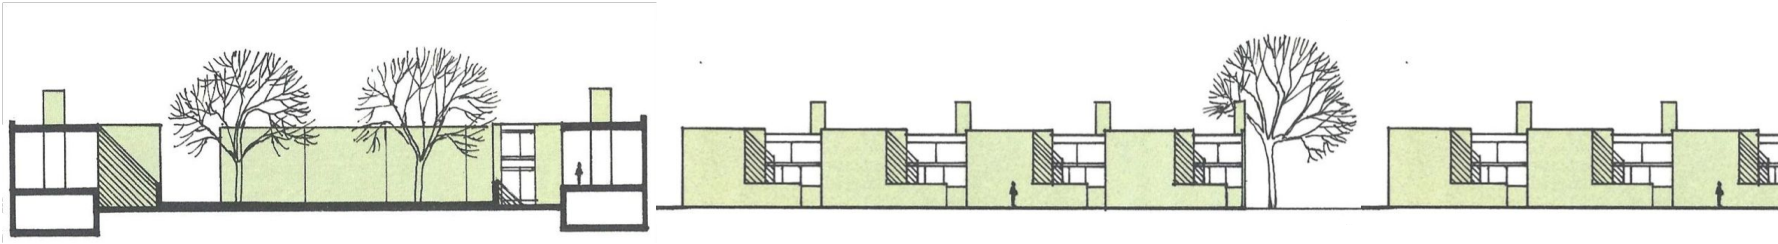

social
responsibility

user
experience

© George Dorsey

A mixed-use working space

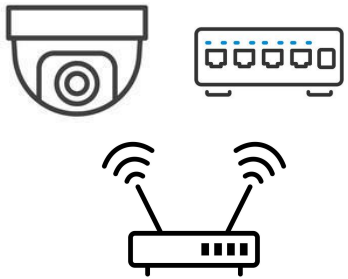

> designed with sustainability as a mandate
> the building should adapt to human behavior
> supports small businesses with different needs
> hosts occasional events

they need a network that helps them save, not consume.

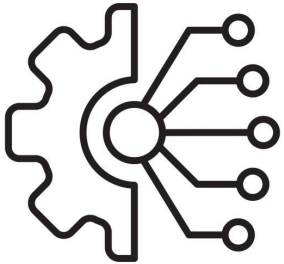

© George Dorsey

Proposal

a simple way to secure the facility and turn off wireless when different parts of the building aren't in use

camera, switch and APs

api + python

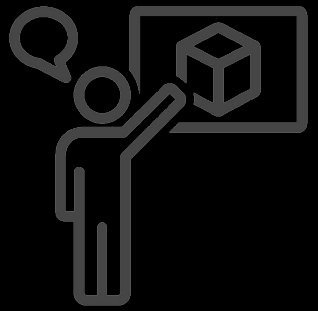

smart schedules

flask web app

© George Dorsey

demo

Review: what happened?

- ✔ Created a new Meraki network
- ✔ Added two new switches
- ✔ Configured the switches for access points on two floors in 4 different zones
- ✔ Added a ”Sustainability” schedule to shut down all ports with APs during off hours
- ✔ Listened for motion events from cameras in each zone, turned off the schedule for 3 hours if motion detected
- ✔ Logged all motion in a database for further learning
- ✔ Adapted to new people behavior to optimize efficiency

© George Dorsey

Outcomes & future

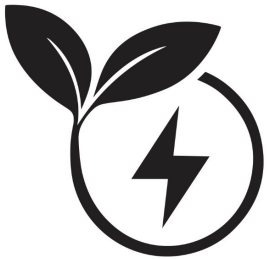

saving time, money and the planet

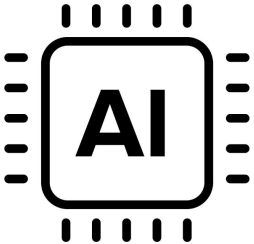

secure, connected space

70% reduced configuration time

up to 43% reduction in consumption

smarter with time

© George Dorsey

thank you, and...
